

Two Half Day LIVE Dental Photography

Key for successful anterior restorations
with Szabi Hant MDT

Lecture description:

The Intensive 1 day hands-on broken up in 2 for those who can't participate the full day version.

This course is about Dental Photography in a new format with small groups for the most effective learning! Live from Perth, from my lab, the whole course is covered with multiple cameras.

I will teach you how to take the best possible documentation and shade communication photographs with your own camera and flash setup.

I'll demonstrate and teach our photography protocol we use with Dr Tony Rotondo since 2010. Q&A sections, live demonstrations, instant image reviews from the participants.

After the course you can send me your first couple of intraoral images for advice and suggestions!

Learning objectives:

- Camera basics and differences between cropped and full frame formats
- Which gear is the best for you
- Calibration of your digital tools
- Use the different type of illuminations: point, diffused, reflected and polarised
- Shade analysis through photographs for ceramic or composite layering
- Intra-oral, object and portrait photography
- How to take and edit photos for Instagram and Facebook!

DAY 2

8.30	Checking the home work results
9:30	Evaluation of the intra oral photographs
10.00	Portrait photography - theory and hands-on
10.15	Afternoon tea break
11.15	Object photography and digital workflow
12.30	Summary

Recommended gear and tool list for the course:

1. Ideally a **DSLR** or **Mirrorless** camera with proper **macro** lens. Otherwise a **smartphone** is handy.
2. **Twin** or Ring flash - My recommended reliable flash is the [Metz 26-AF2](#) or AF1 (cheaper but maybe not available)
3. Flash bracket for twin flash setup - e.g. [Agno's brackets](#), [Indusbello brackets](#), [cheaper eBay bracket](#)
4. **White balance card** - [WhiBal](#) or any proper one like eLab grey card
5. **Cross polarisation** filter for twin flashes setup: [PolarFrame](#)
6. **Laptop** - with PowerPoint or Keynote and/or photo editing software if you want to practice basic photo editing and shade analyses
On Windows install Aquarelle Picker. [Download from my Dropbox](#)
7. **Ivoclar A-D shade guide** - [Order here](#)
8. **Shofu Gummy** order number: **7040** - Important! the new one is too small. Order from [Alphabond](#) in Australia
9. Black contraster
10. Cheek retractors, lip retractor for occlusal photos
11. Dental Photo mirrors
12. Implant replicas, crowns, veneers, stone models etc. for object photography
13. Mini soft boxes or my [Object Photography Diffuser Kit](#)
